

David Aihe

Software Engineer | Applied AI

Bowie, MD | doa9200@gmail.com | [GitHub](#) | [LinkedIn](#)

TECHNICAL SKILLS

AI & LLM Development: LLM applications, agent workflows, RAG, prompt design, tool calling, evaluations, OpenAI API, Anthropic API, LangGraph, Claude Code, Codex

Frontend: React, React Native, TypeScript, JavaScript, Redux, HTML5, CSS3, Tailwind CSS, Jest, Cypress

Backend & Data: Java, Spring Boot, Node.js, REST APIs, SQL, PostgreSQL, SQLite

Cloud & Tools: AWS, Git, Firebase, Vercel, Render, Agile/Scrum, BlazeMeter

Certification: AWS Certified Developer - Associate

EXPERIENCE

Sandstorm Design - Software Engineer (Contractor) | Sep 2026 - Present

- Developing NextJS-based frontend experiences for client web applications and CMS-driven sites, collaborating with designers and developers to deliver production updates.
- Building reusable Sitefinity widgets and React components for client CMS implementations, translating design and content requirements into configurable frontend experiences.
- Supporting CMS modernization and upgrade efforts across multiple client sites, adapting frontend implementations and validating changes through release.

JPMorgan Chase - Full Stack Software Engineer | Oct 2022 - Jun 2026

- Built reusable React and TypeScript components with Redux, reducing duplicate web calls and improving application performance by 30%.
- Built Java and Spring Boot REST APIs for internal applications, improving data reliability and supporting teams that depended on those services.
- Added Cypress and JUnit tests across assigned features, maintaining 90-100% test coverage where measured.
- Used BlazeMeter to test performance and support changes that improved throughput and reliability by 20% for more than 30,000 users.
- Helped modernize a company-wide internal platform by replacing legacy frontend patterns with TypeScript and shared components.
- Led React training sessions and worked with product owners, designers, and engineers through planning, code reviews, and delivery.
- Proposed and demonstrated AI-assisted development workflows, including a knowledge-graph approach for tracking context across a large application.

EDUCATION & TRAINING

Gauntlet AI - AI Engineering Fellowship | Feb 2026 - Apr 2026

- Intensive applied AI engineering fellowship focused on RAG, knowledge graphs, AI agents, evaluations, cloud deployment, and enterprise AI systems.
- Built and deployed systems including ClawdForge, an agentic software factory using LangGraph and the Claude Agent SDK; FortranLens, a RAG platform over 250,000+ lines of legacy Fortran using Pinecone and OpenAI embeddings; and multimodal and scheduling applications using Claude, OpenAI, PostgreSQL, and Docker.

BloomTech (formerly Lambda School) - Full Stack Web Development | Oct 2021 - May 2022

- Intensive full-stack web development program covering HTML, CSS, JavaScript, React, Node.js, Express.js, and SQL.
