

David Aihe

Software Engineer | Applied AI

Bowie, MD | 202-641-2579 | doa9200@gmail.com | [GitHub](#) | [LinkedIn](#)

SUMMARY

Full-stack software engineer with nearly four years of professional experience building and modernizing enterprise applications at JPMorgan Chase. Strong background in React, TypeScript, Java/Spring Boot, testing, performance, and cross-functional delivery, with additional applied AI experience building agentic, RAG, multimodal, and evaluation-driven systems.

TECHNICAL SKILLS

AI & LLM Development: Claude, OpenAI, Gemini, LangGraph, Claude Agent SDK, RAG, embeddings, Pinecone, Langfuse, agentic workflows, tool use, knowledge graphs, evaluations

Frontend: React, React Native, Next.js, TypeScript, JavaScript, Redux, HTML5, CSS3, Tailwind CSS, Jest, Cypress

Backend & Data: Java, Spring Boot, Node.js, REST APIs, SQL, PostgreSQL, SQLite

Cloud & Tools: AWS (ECS, Glue, DynamoDB, CloudWatch), Docker, Git, Firebase, Vercel, Render, Inngest, Twilio, Agile/Scrum, BlazeMeter

PROFESSIONAL EXPERIENCE

JPMorgan Chase - Full Stack Software Engineer | Oct 2022 - Jun 2026

- Developed reusable React and TypeScript components integrated with Redux, reducing redundant web calls and improving application performance by 30%.
- Built and enhanced internal scorecard and analytics experiences, including pass-rate and specialist performance views, while improving accessibility across reusable enterprise UI components.
- Engineered Java and Spring Boot REST services for internal applications, improving data reliability and streamlining delivery across dependent teams.
- Helped lead the modernization and rebuild of a company-wide enterprise platform, replacing legacy frontend patterns with TypeScript and shared components while supporting Java and internal design-system upgrades.
- Established Cypress end-to-end and JUnit unit testing practices for assigned features, maintaining 90-100% test coverage where measured and improving deployment confidence.
- Used BlazeMeter for performance benchmarking and bottleneck analysis, supporting changes that improved application throughput and reliability by 20% for more than 30,000 users.
- Worked with AWS services including ECS, Glue, DynamoDB, and CloudWatch to support deployments, data workflows, monitoring, and troubleshooting across enterprise applications.
- Partnered with product owners, designers, backend engineers, and other developers through Agile planning, backlog refinement, code reviews, and iterative delivery.
- Created and led React training sessions and mentored developers on component architecture, state management, testing, accessibility, and maintainable frontend patterns.
- Introduced AI-assisted development and context-tracking approaches after completing Gauntlet, including a knowledge-graph workflow for understanding relationships across a large enterprise codebase.

PROJECTS

- [Jane 1.0](#): Built an AI-powered dictation app that turns spoken input into clean, usable text for everyday writing and coding workflows, with a voice-first interface designed to reduce friction between speaking and typing.
- [Nerdy Ads \(Demo\)](#): Built and deployed an autonomous multi-agent ad generation system for SAT prep campaigns using Gemini, with researcher, writer, evaluator, and editor agents, iterative quality gates, a React dashboard with live SSE updates, Langfuse observability, and cost/quality tracking.
- [ClawdForge](#): Built an AI software factory that converted prompts into working applications through agentic workflows, structured planning, automated build and test pipelines, approval gates, and orchestration with LangGraph and the Claude Agent SDK.
- [FortranLens](#): Built and deployed a RAG-powered legacy code intelligence system over 250,000+ lines of gfortran source using RAG Fusion, semantic retrieval, Pinecone, OpenAI embeddings, and grounded answer generation.
- [CamChecklist](#): Built and deployed a multimodal AI checklist application using voice, photo, and natural-language inputs with Claude tool use, secure authentication, PostgreSQL persistence, observability, and Dockerized frontend and backend services.
- [AirOps](#): Built and deployed a multi-tenant scheduling optimization system combining deterministic workflow orchestration with AI-assisted ranking, messaging, and approval flows using Next.js, TypeScript, PostgreSQL, Inngest, Twilio, and OpenAI.
- Additional work: Brownfield agent design for Ghostfolio, ReAct-style tooling in CollabBoard, and evaluation-driven AI application design across multiple deployed systems.

EDUCATION & TRAINING

Gauntlet AI - AI Engineering Fellowship | Feb 2026 - Apr 2026

- Intensive applied AI engineering fellowship focused on RAG, knowledge graphs, AI agents, evaluations, cloud deployment, and enterprise AI systems.

BloomTech (formerly Lambda School) - Full Stack Web Development | Oct 2021 - May 2022

- Intensive full-stack web development program covering HTML, CSS, JavaScript, React, Node.js, Express.js, and SQL.
